15M ROPE LINE WITH ADJUSTER AND SHOCK ABSORBER

ZRL - 15
DESCRIPTION

ROPE LINES are temporary anchorage solutions to provide protection when ascending or working at height on a flat or sloping surface. These systems rely on the user generally to provide the adjustment to keep them at risk of minimal fall.

Typically used in Roofers Kits to transfer the Anchor point from where it is attached to the structure to adjacent to the user – ideally above him whilst climbing and at connection point to harness at worst when line is taut.

GFORCE Mechanics

MAXISAFE ADVANTAGES

- 11mm Kernmantle Rope
- Passivated Steel Lock off Adjuster
