INTRODUCTION TO MAXISAFE HARD HATS

Maxisafe hard hats are available either vented to keep you cool in warm climates or unvented to reduce dust ingress - to keep you cool and comfortable in any weather, UV protected for added strength and longer life, made from top quality materials and certified to AS/NZS 1801:1997 standards. That's the Maxisafe difference.

Ventilation

Warm air rises. So ventilation holes need to be at the top of the helmet shell to expel hot air where it gathers and to draw in cool air from below, the Maxisafe design allows your head to breathe, especially when working outdoors in hot weather for optimum wearer comfort.

UV Protection

High quality (UV Resistant) ABS materials are free from material ageing due to intensive UV light exposure (i.e. sunlight). Also provides extra impact and penetration protection against normal ABS materials.

Polycarbonate

Material used for high temperature requirements. (This material meets AS/NZS 1801 Type 2 standards).

Polypropylene

This is a new generation material specially designed to meet the requirements of AS/NZS 1801 Type 1. This material has better UV resistance than ABS - up until now ABS was the most commonly known material used for hardhats and is not as highly UV rated as Polypropylene.

FEATURES & BENEFITS

- High impact ABS material is UV resistant

- Apply your company's logo, or a customer's company logo to the Maxisafe helmets. Various designs, locations and colours are available. Use the power of branding to reinforce and grow your company's image in the marketplace.

- Certified to AS/NZS 1801:1997

- Designed and manufactured in Australia

- Vented or unvented

- Large capacity rain trough

- Attachment slot accepts most 25mm style earmuffs and accessories

- Six point webbed harness available in ratchet or sliplock style

Vented Hard Hat with Sliplock Harness

E-MAN Retractable Visor Helmet

HEM578 IR Visor

Features & Benefits

- The visor protects the whole face and can be completely pushed up between the helmet shells if not used.
- Electric arc according to GS-ET29 Class 1 + 2 4000 Amps for 0.5 seconds.
- State of the art crumple zones similar to modern day cars
- By compressing and destroying of the Crash Box, the E-MAN is capable to absorb far more impact energy than any single wall helmet and therefore provides additional protection to the user.
- E-MAN has been tested and certified according to EN 397 (Safety Helmets) and EN 50365 (Electricians Helmets). VDE approved.
- 6 point ratchet system harness
- Tested and certified* according to additional requirements for testing and certification of face shields for electricians according to GS-ET-29 BG Prufzert
- Red Dot Design Award Winner 2009
